But  $p_1(U \cap V) = U$ , so a basic open set of the product topology is sent by  $p_1$  to an open set in  $X$ . **Metric Spaces and Some Basic Topology - UC Davis Mathematics**  $X$  is open because for all  $x \in X$ ,  $B_1(x) \subset X$ . It can ALSO be closed. In topology, a set is not like a door. It may be open, it may be closed, and it may be both. **basic topology** - Basically, topology is the modern version of geometry, the study of all different sorts of spaces. Topology is almost the most basic form of geometry there is. **calculus - Basic topology: having trouble understanding a couple of** In this broad introduction to topology, the author searches for topological invariants of spaces, together with techniques for calculating them.
