

Debunking ADHD: 10 Reasons to Stop Drugging Kids for Acting Like Kids

The time has come for Debunking ADHD and exposing how this invented disorder created to drug children does not exist. Despite unanimous agreement that no test exists to identify ADHD, 6.4 million American children are labeled ADHD. To make matters worse, approximately two-thirds of those children diagnosed ADHD are prescribed drugs with many dangerous side effects, which include developing more serious mental disorders and death. After six decades of marketing stimulants and scaring parents into thinking something is seriously wrong with their highly creative, energetic, and communicative children, ADHD drug manufacturers still claim they have no idea what ADHD drugs actually do to childrens brains. They make such claims when research shows ADHD drugs cause permanent brain damage in lab animals. How can children reach their full potential, if they are drugged? How can they dream about achieving greatness and release their imagination and creativity when they are drugged every day, year after year, to do the opposite? This book provides you evidence to say no to ADHD and gives 10 Reasons to Stop Drugging Kids for Acting Like Kids!
