

# Introduction To Meteorology

INTRODUCTION TO METEOROLOGY  
by SVERRE PETTERSSEN. Preface:

The aim of this book is to present in an elementary manner the basic principles of modern meteorology. Intended for students without previous acquaintance with the subject, it is written in response to a demand for a nontechnical text to serve the many short and elementary courses in meteorology already in progress in the United States. It is written more for the purpose of creating interest and background than for furnishing a technical and detailed discussion of the various branches of meteorology. For this reason the use of calculus in the presentation of meteorological theories has been avoided. Actually, this book is an expansion of a chapter on meteorology written for the British Empire edition and the American edition of Weemss Air Navigation and an abbreviation of the authors recent book Weather Analysis and Forecasting. 1 However, this book is not addressed specifically to pilots or weather forecasters, although its leaning is decidedly toward synoptic and aeronautical meteorology. On account of its elementary character, the text does not contain references to meteorological journals and papers. Instead, a list of advanced textbooks is included to assist the reader in finding more advanced literature on meteorology. The authors warm thanks go to Miss Margaret Whitcomb for her valuable assistance in revising the text, preparing the diagrams and tables, proofreading, and indexing. SVERRE PETTERSSEN.

Contents include: PREFACE v  
INTRODUCTION 1 CHAPTER I. THE  
ATMOSPHERE 3 Composition Impurities  
Structure Stratification. II.  
OBSERVATIONS AND INSTRUMENTS  
10 The Mercurial Barometer Pressure  
Pressure Units Variation in Pressure with  
Elevation The Aneroid Barometer-The  
Barograph The Altimeter Temperature The

Thermo graph-Humidity Humidity  
Instruments Meteorographs, Wind  
Direction and - Velocity-Pilot Balloon  
Observations Classification of Clouds Fog  
and Mist Haze Precipitation Clouds and  
Precipitation Cloudiness Ceiling Visibility  
Use of Meteorological Observations. III.  
EVAPORATION, CONDENSATION,  
AND PRECIPITATION 43 Evaporation  
Nuclei of Condensation the Condensation  
Process The Precipitation Process. IV.  
ADIABATIC TEMPERATURE  
CHANCES 49 The Gas Law The First Law  
of Thermodynamics Adiabatic Processes  
Ascent and Descent of Nonsaturated Air  
Ascent and Descent of Saturated Air The  
Adiabatic Chart Poten tial Temperature  
Evaluation of the Condensation Level. V.  
STABILITY AND INSTABILITY 61  
Definitions Nonsaturated Air-Saturated Air  
Conditional Instability Convective  
Instability. VI. TEMPERATURE  
VARIATIONS AND THEIR RELATION  
TO THE WEATHER PHENOMENA 68  
Sources of Heat Radiation Transfer of Heat  
Vertical Mix ing - Horizontal Mixing  
Heating and Cooling of Air over Land  
Heating and Cooling of Air over Oceans  
Heating and Cooling of Traveling Air  
Masses Convection Convective Clouds  
Thunderstorms Inversions Formation of  
Fog Diurnal Variation of Fog Fog over  
Snow-covered ground Classification of Fog  
Distribution of Fog Ice Accretion.
