

Reduced Fusion Systems over 2-groups of Sectional Rank at Most 4 (Memoirs of the American Mathematical Society)

The author classifies all reduced, indecomposable fusion systems over finite 2 -groups of sectional rank at most 4 . The resulting list is very similar to that by Gorenstein and Harada of all simple groups of sectional 2 -rank at most 4 . But this method of proof is very different from theirs, and is based on an analysis of the essential subgroups which can occur in the fusion systems.
